EDUCATION

Vancouver Island University

Bachelor of Science in Computer Science

Expected Graduation

Cumulative GPA

Nanaimo, BC

Sep. 2023 – Present

Apr. 2027

3.84

PROJECTS

CoastalClarityCleaning.ca | *Python, Flask, HTML/CSS*

Apr 2026 – Present

- Developed a full-stack website using Flask serving HTML pages as the frontend for a local business in Nanaimo
- Client requested a multi-page site with a contact form
- Implemented the contact form using Python and SMTP, site was served with Flask
- Used Render to host site and Cloudflare for domain and DNS properties
- Implemented Search Engine Optimization to make business visible on Google with Google Search Console

Surrounded | *C#, Unity Hub, Git, Object-Oriented Design*

Sep 2024 – Jan 2025

- Collaborated in a team to design and develop a strategy-based game in Unity using C# and OOP principles
- Utilized Git for version control to manage collaborative workflows and ensure code integrity across the team
- Executed rigorous debugging and testing phases to deliver a fully functional product for a Software Engineering course

Stock-Sentiment-Tracker | *Python, Flask, JavaScript, AlphaVantage API, yfinance*

Jan 2026 – May 2026

- Architected a full-stack application to aggregate stock sentiment, historical price data, and expert analysis
- Developed a visualization dashboard featuring three-month price graphs and Bearish-Bullish market sentiment indicators
- Built a backend system allowing users to save stock symbols and receive automated email alerts for market shifts
- Collaborated with a team to apply Object-Oriented Programming (OOP) principles within a Flask web framework

Formula 1 Data Website | *Python, Flask, HTML/CSS, OpenF1 API*

Jan 2026 – Apr 2026

- Developed a dynamic web application to display driver and constructor performance data via the OpenF1 API
- Engineered Python scripts to retrieve, process, and present complex motorsport statistics for end-users
- Designed and implemented a multi-page interface including Home, Drivers, Teams, and Schedule views

Automated Ticket Price Tracker | *Python, Selenium, HTML Parsing, Email Automation*

Nov 2025 – Feb 2026

- Created an automated monitoring system to track Ticketmaster listings for specific ticket types and price thresholds
- Leveraged Selenium for browser automation to scrape dynamic web content and extract real-time pricing data
- Implemented an automated notification system to send hourly summaries and instant email alerts for price drops

TECHNICAL SKILLS

Languages: Python, C/C++, C#, SQL, JavaScript, HTML/CSS, Verilog

Frameworks: React, Node.js, Flask, WordPress, FastAPI

Developer Tools: Git, Google Cloud Platform, VS Code, Visual Studio, PyCharm
